SAFETY-FOCUSED FLEET MANAGEMENT ADVISORY

Benchmarking the way you manage your fleet with respect to safety

As a fleet or ship manager, you are forced to constantly maintain, organize, assess and make decisions based on extensive incoming information. We enable you to benchmark and identify critical areas across your fleet.

Improving safety - a case study

A major chemical tanker operator had undergone a major organisational change and, as a result, begun to experience increasing numbers of safety findings during PSC inspections. The problem: There was the impression of increased commercial pressure on board, a lack of confidence in management and evidence of procedural non-compliance.

Our solution

- Safety culture questionnaire issued to all seagoing staff
- Analysis of results and benchmarking of safety culture against other sector and industry operators
- Development of company "Safety Model" and risk management philosophy
- Joint development of shore-based training for seagoing staff
