

MARITIME

DOCKING PROJECT MANAGEMENT

DNV GL Maritime Advisory offers docking project management services which maximise the output of docking tasks while keeping the docking project within budgetary and timeline limitations. This is achieved by effective and efficient planning, coordination, execution and monitoring of your docking project management and implementation of the docking plan.

Managing a time- and cost-efficient docking project is a challenge

Docking of ships is often considered the most complex and competence-demanding task, even for highly experienced superintendents and fleet managers. Cost and time overrun are the two most critical challenges for today's docking project. Additional challenges such as quality assurance, safety management, logistics management and change management are other essential functions that require consideration during docking.

Your benefits with docking project management from DNV GL:

- Reduce the risks of docking expenditure overruns and maximise your docking budget
- Shorten the docking schedule by prioritising the docking project's critical tasks and optimising the critical paths
- Develop and implement contingency plans when deviations arise
- Mitigate the risk of off-hire periods and prevent project delay
- Facilitate a smooth transition of operation for the vessel during docking

Our docking project management service covers:

- Structured documentation regime
- Precise and detailed specification development
- Comprehensive docking plan
- Thorough risk assessment and mitigation
- Identification, tracking and monitoring of critical tasks and paths
- Generation and adoption of an effective communication scheme
- Seamless logistics management
- Pre-docking/post-docking arrangement
